

LINE SEIZURE EXPLAINED

Kings III Line Seizure: The Proper Way to Share a Phone Line

Kings III's voice communication line seizure technology enables true two-way communication of multiple emergency phones on a single existing line, eliminating the cost of dedicated phone lines.

STANDARD PHONE SCENARIO

LINE SEIZURE SCENARIO

With our unique dialer, all phone calls are consolidated, enabling simultaneous two-way communication between each elevator cab and our Emergency Dispatch Center. As each phone is activated it sends an identifying signal, allowing our operators to locate each caller to the specific cab, as ADA requires. We support up to 8 elevator cabs on a single Kings III dialer.

FREQUENTLY ASKED QUESTIONS

Q: What does phone line seizure mean and how is that different from line sharing?

A: Line sharing means that a telephone line is used by more than one telephone device. Our smart line seizing technology captures and takes over an existing phone line for use by our emergency phones.

Q: Why would I want a line to be seized instead of shared?

A: Our unique line seizure enables our emergency phones to take over a phone line and use it to contact the Emergency Dispatch Center, while blocking access by non-emergency devices until the emergency call is completed. With line sharing, a non-emergency device may block emergency calls exposing you to liability.

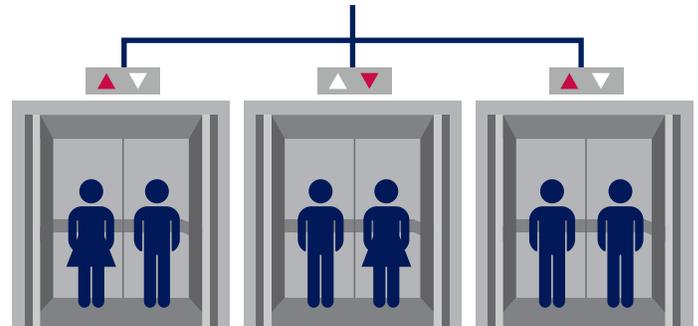

Q: Doesn't code say they have to be dedicated lines?

A: No, the intent of the code is that the emergency phone always have priority access to the phone line. Kings III offers reliable technology to ensure code compliance while eliminating your need for costly dedicated emergency phone lines.

Q: Can my emergency phones seize any phone line and be code compliant?

A: Yes, with our technology your emergency phones are compliant when seizing any non-essential POTS line (fax or secondary fire) in your building. This eliminates the need for you to pay for a costly dedicated phone line to your elevator. We can help you check your local county codes for compliance.

SINGLE PHONE LINE

Problem: Fails ASME and ADA because all phones will not work simultaneously. One phone off-hook prevents remaining phones from operating properly, often blocking calls completely.

Operator cannot call back into individual elevators. When multiple elevator phones are in use, operators may not be able to play the location message.

SINGLE PHONE LINE

With Kings III's smart dialer, all phone calls consolidate to enable simultaneous two-way communication between each elevator cab and our monitoring station. As each phone is activated, it sends an identifying signal allowing our operators to locate each caller as ADA requires.
